

CSR TESTING-OUT FOR EXXONMOBIL

ExxonMobil has decided allowing contractors that meet a certain criteria to test out of the CSR class. Here are the guidelines:

1. Any contractor worker that meets the criteria would be permitted to test out
2. Pre-requisites for contractor employees testing out:
 - a. Student must have taken and passed TRCSO, TRCSR or the TRCSRTO (CSR test out course) once each calendar year within the previous 3 consecutive calendar years (a calendar year is defined as a anytime between January 1 and December 31), and
 - b. Student would be able to take the TRCSRTO (CSR test out course) only for 2 consecutive years. The third year would need to take TRCSR or TRCSO course.
 - c. Do not allow TRCSRTO registration if TRCSO or TRCSR has been taken within 9 months.
3. Student cannot register for two of these courses at the same time - TRCSO, TRCSR and TRCSRTO. Registration for CSO or CSR will trump registration for TRCSRTO.
4. The same 25 question TRCSR test will be used for TRCSRTO. Passing grade will be a minimum of 92%. No retakes will be permitted.
5. If individual fails TRCSRTO (gets less than 92% score), the individual must take the regular TRCSR or TRCSO course.
6. The course code for the “test out” course is TRCSRTO.
 - a. The course code would print on the back of the ID
 - b. This course would satisfy the requirement to take ExxonMobil site specific
 - c. This course would not meet the requirements to take any other site specific training requiring successful completion of TRCSO/TRCSR
 - d. This course would be an option under the ExxonMobil curriculum. It is up to the contractor to enroll the student in TRCSRTO or the TRCSO/TRCSR class.
 - e. It is not mandatory for a contractor to enroll its workers in this course
 - f. Don't permit individual to register for TRCSRTO if the pre-requisites are not met
 - g. This course would be available 5 days per week from 7:30 am to 1:00 pm
 - h. The cost of the test-out course (TRCSRTO) would be the same as the TRCSR class
 - i. Badge will print with yellow stripes on the front denoting no TRCSO/TRCSR training
7. When the TRCSR class content or the test are revised, a decision would need to be made by ExxonMobil on whether to allow workers to test out
